Amount of visualizations for create a tableau story

Brian A over 1 year ago

Hello everyone,

I'm finding that I am exploring a lot with create a tableau story and some of the other topics. It's very refreshing to feel this way :)

My question is if I should limit the amount of visualizations to the create a tableau story as the rubric doesn't specify so I'm assuming at least one is minimum, but I'd like to not go overboard and get hung up either so some guidance is needed.

Regards,

Brian

Hello Brian!

We're glad that you find the project interesting!

Please note that there isn't a strict requirement regarding the number of visualizations that you come up with, as long as you meet the requirements specified in the rubric.

The key requirement is that your visualization(s) should center on a specific, clear finding in the data. Your reviewer will be judging your submission on whether it provides a clear communication between the reader and the visualization. As long as you've succeeded in getting your finding(s) across to the reviewer, the submission should meet the expectations.

Also, do check out the rubric linked above before you're ready to make the final submission, just so as to be sure that you haven't missed any of the minimum requirements. All the very best for your submission!
